SIRIUS ON MEZO

Your Bitcoin pays for private AI.

Rent a private dataset for one training run. Pay in MUSD, even straight from your Bitcoin. Receive the model, never the data.

Ali Ben Yezza · Mezo Buildathon, Wave 2 · sirius-mezo.vercel.app

The most valuable data in the world can never leave the building.

Banks
know who repays a loan

Utilities
know when the grid will peak

Retailers
know what will sell tomorrow

AI teams
never get to learn from any of it

THE SOLUTION

So we rent out the training run, not the data.

01

The provider encrypts

the dataset in their browser and sets a price in MUSD.

02

The buyer pays in MUSD

into an escrow on Mezo. It waits there until the model is delivered.

03

Only the model leaves

The buyer gets the trained model. The escrow pays the provider, or refunds after the deadline.

Nobody downloads a single row. Every run leaves a signed certificate, checkable against the escrow on Mezo.

Four ways to pay. Three never sell BTC.

01

Borrow & Buy

Draw only the missing MUSD from your Mezo trove, with one signature. The BTC stays as collateral.

02

Pay with BTC

Swapped to MUSD on Mezo Pools and locked in the escrow, in one transaction.

03

One signature

A MUSD permit and a signed lock. Sirius submits it and pays the gas.

04

Classic

Approve, then lock, from your own wallet.

Before every draw, Sirius checks Recovery Mode, the collateral ratio after the draw and the trove’s maximum borrowing capacity.

Every sale puts MUSD back to work on Mezo.

Stability Pool

Providers move their earnings into Mezo’s MUSD Stability Pool, from the app.

BTC/MUSD gauge

Half of every platform fee is posted on the gauge, for veBTC voters.

veMEZO

Providers holding veMEZO pay a 1 % fee instead of 2 %.

AI agents

Agents pay per prediction in MUSD over x402, settled by Mezo’s facilitator.

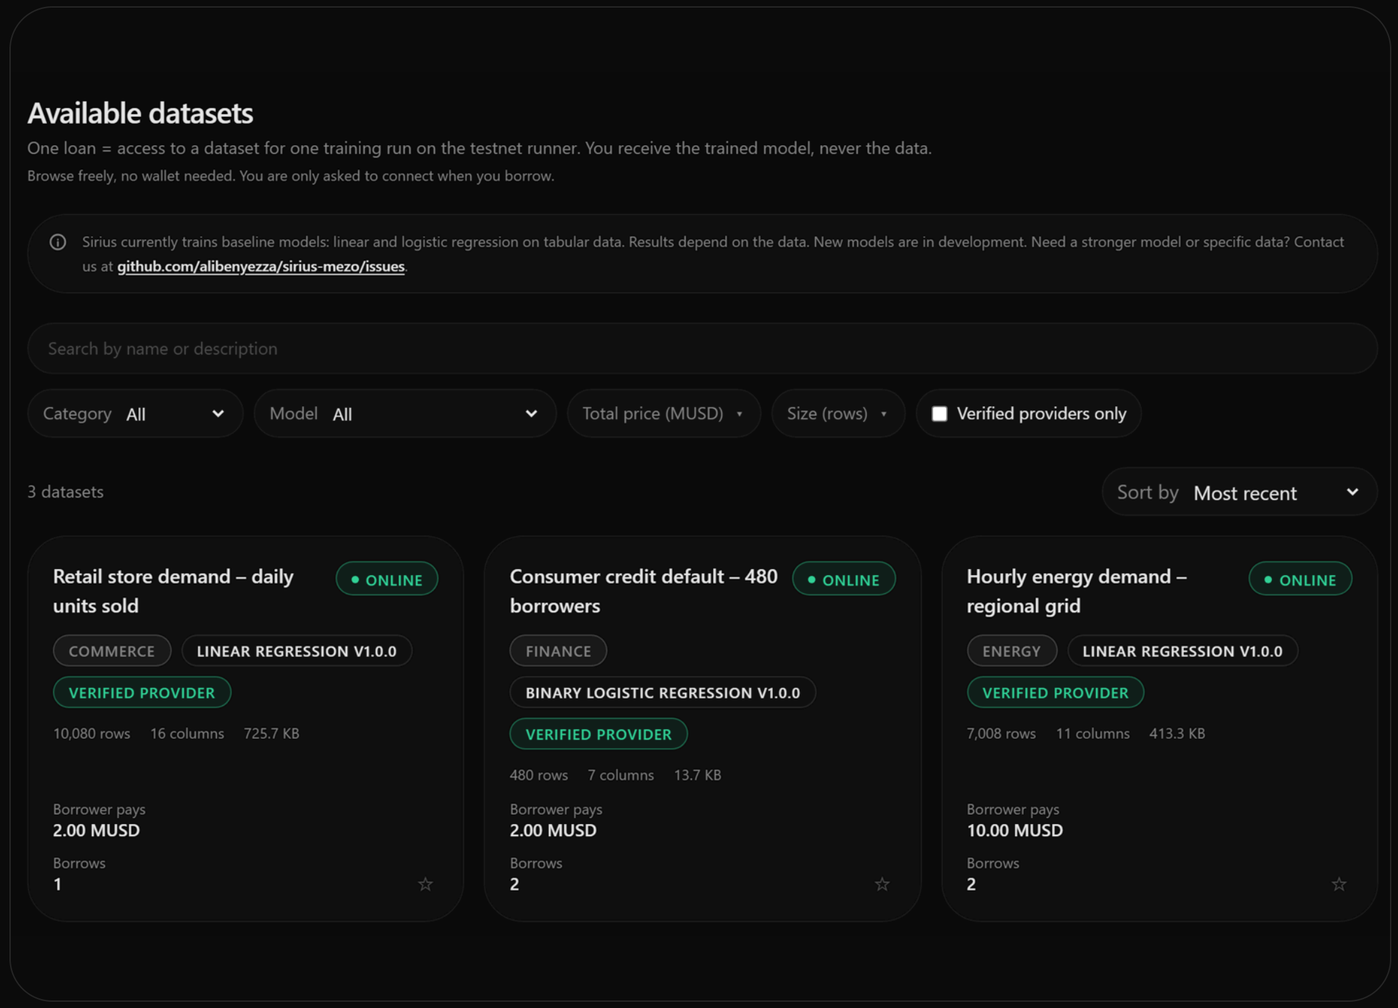

LIVE ON MEZO TESTNET

It’s live, and every claim has a transaction.

3 buyers outside the team paid, trained and settled on the live site

Borrow & Buy: trove draw, one-signature lock and release, all on-chain

6 contracts source-verified, and 11 of 11 simulated attacks refused on /break

The Wave 1 review, point by point.

The review asked for	What shipped
MUSD’s Bitcoin backing in the flow	Borrow & Buy, draw 0xf0d0…1263
Earnings into the Stability Pool	provideToSP 0xa3c3…676e
A faucet that works	Transfers MUSD from a funded reserve
Contracts verified on the explorer	6 of 6 source-verified
A real buyer outside the team	3 external buyers, each locked and released
A deck, a track, a revenue model	This deck · Tracks 1 and 2 · slide 08

Green: done and checkable. Every transaction is linked on sirius-mezo.vercel.app/proof.

BUSINESS MODEL

We earn when MUSD moves.

2 %

on every released sale, taken on-chain by the escrow. Never on a refund; 1 % with veMEZO.

50 / 50

The fee is split on-chain: half to the treasury, half to the BTC/MUSD gauge.

Per call

AI agents pay for each prediction in MUSD over x402.

Track 1 · DeFi

MUSD and the BTC behind it as productive capital

Track 2 · Access and distribution

A marketplace that gives MUSD a recurring use

THE TEAM

One builder who ships. Every line of Sirius on Mezo.

Ali Ben Yezza

Founder · contracts, product, full-stack
